Remarks

- Text fonts can also be called by `\textbf{...}`, `\textit{...}` (which does automatic italic correction), *et cetera*.
- Fonts in the math environment can be called using `\mathrm{...}`, `\mathit{...}`, and so on.
- Some simple style combinations are possible, but sometimes the order matters, and some combinations may not work without resorting to different font commands. For example, `{\it \bf Squid}` produces only the bold **Squid**, `{\bf \it Squid}` produces only the italic *Squid*, `{\bf \itshape Squid}` produces the bold, italic ***Squid***.
