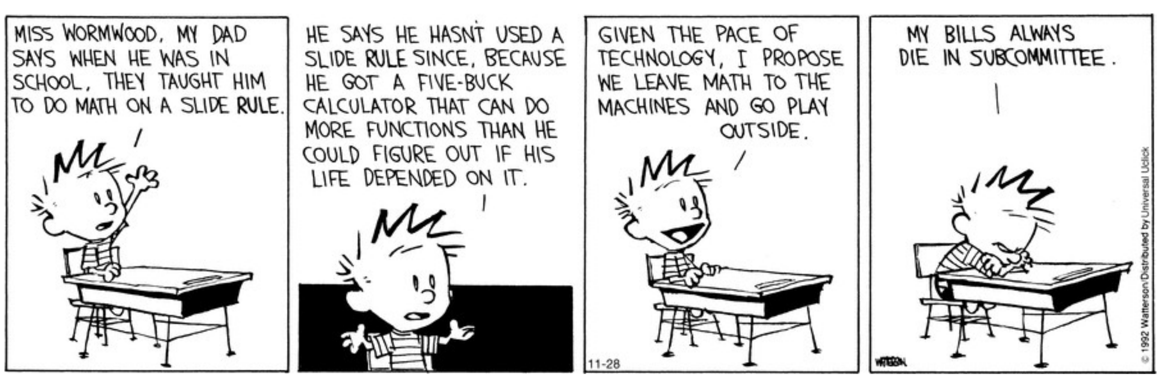
MATH 218D-1
MIDTERM EXAMINATION 1

Name		**Duke Email**	@duke.edu

Please **read all instructions** carefully before beginning.

- Do not open this test booklet until you are directed to do so.
- You have 75 minutes to complete this exam.
- If you finish early, go back and check your work.
- You may use a **calculator** for doing arithmetic, but you should not need one. All other materials and aids are strictly prohibited.
- For full credit you must **show your work** so that your reasoning is clear, unless otherwise indicated.
- Do not spend too much time on any one problem. Read them all through first and attack them in an order that allows you to make the most progress.
- Good luck!



Problem 1.

[25 points]

Consider the matrix

$$A = \begin{pmatrix} 1 & -1 & 2 \\ -2 & 2 & -4 \end{pmatrix}.$$

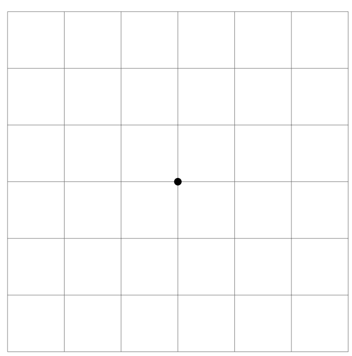
a) Use Gauss–Jordan elimination to put A into reduced row echelon form.

$$A \xrightarrow{\text{REF}} \begin{pmatrix} \quad & \quad & \quad \\ \quad & \quad & \quad \end{pmatrix}$$

b) The free columns are ☐.

c) The rank of A is ☐.

d) Draw a picture of the column space Col(A) below.



e) Write down a vector b in $\mathbf{R}^2$ such that $Ax = b$ has no solution. If no such vector exists, explain why not.

$$b = \begin{pmatrix} \quad \\ \quad \end{pmatrix}$$

f) The null space is a (circle one) $\begin{pmatrix} \text{point} \\ \text{line} \\ \text{plane} \end{pmatrix}$ in (fill in the blank) $\mathbf{R}^{☐}$.

(Problem 1, continued)

g) Find the general solution of $Ax = \binom{-2}{4}$ in parametric vector form.

$$x = \begin{pmatrix} \\ \\ \\ \end{pmatrix} +$$

h) Express Nul(A) as a span of some number of vectors.

$$\mathrm{Nul}(A) = \mathrm{Span}\left\{ \quad \right\}$$

i) Write down any nontrivial solution of $Ax = 0$.

$$x = \begin{pmatrix} \\ \\ \\ \end{pmatrix}$$

Problem 2. [25 points]

Consider the matrix

$$A = \begin{pmatrix} 2 & 3 & 1 \\ -4 & -5 & -3 \\ -2 & -6 & 0 \end{pmatrix}.$$

a) Find a lower-unitriangular matrix L and a matrix U in REF such that $A = LU$. You should end up with

$$U = \begin{pmatrix} 2 & 3 & 1 \\ 0 & 1 & -1 \\ 0 & 0 & -2 \end{pmatrix}.$$

$$L = \begin{pmatrix} \quad & \quad & \quad \\ & & \\ & & \end{pmatrix}$$

b) Solve the equation $Ax = \begin{pmatrix} 0 \\ 0 \\ 4 \end{pmatrix}$ using the LU decomposition you found in **a)**.

$$x = \begin{pmatrix} \quad \\ \\ \end{pmatrix}$$

c) If you compute a $PA = LU$ decomposition using maximal partial pivoting, what is P? (You do not have to do the bookkeeping to find L in this part.)

$$P = \begin{pmatrix} \quad & \quad & \quad \\ \quad & \quad & \quad \\ \quad & \quad & \quad \end{pmatrix}$$

d) Find the inverse of A.

$$A^{-1} = \begin{pmatrix} \quad & \quad & \quad \\ \quad & \quad & \quad \\ \quad & \quad & \quad \end{pmatrix}$$

Problem 3.

[20 points]

Consider the subspace V of $\mathbf{R}^4$ defined by the equations

$$x_1 + x_2 = x_3 + x_4$$
$$x_1 + x_3 = x_2 + x_4.$$

a) Express V as the null space of a matrix A.

$$V = \mathrm{Nul}\left(\qquad \right)$$

b) Express V as the span of a set of vectors.

$$V = \mathrm{Span}\left\{ \qquad \right\}$$

c) Express V as the column space of a (different) matrix B.

$$V = \mathrm{Col}\left(\qquad \right)$$

(Problem 3, continued)

d) One of the following vectors is contained in V. Identify which one is contained in V, and express it as a linear combination of the vectors you found in **b)**.

$$\begin{pmatrix}1\\4\\2\\3\end{pmatrix} \qquad \begin{pmatrix}1\\3\\3\\1\end{pmatrix} \qquad \begin{pmatrix}1\\3\\-3\\-1\end{pmatrix}$$

$$\begin{pmatrix} \\ \\ \\ \\ \end{pmatrix} =$$

Problem 4.

[15 points]

Let

$$A = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 5 & 6 & 7 & 8 \\ 9 & 10 & 11 & 12 \end{pmatrix} \quad \text{and} \quad B = \begin{pmatrix} 5 & 6 & 7 & 8 \\ 6 & 8 & 10 & 12 \\ -9 & -10 & -11 & -12 \end{pmatrix}.$$

a) What three row operations are needed to transform A into B?

first [ ], then [ ], then [ ]

b) What are the elementary matrices E_1, E_2, E_3 for these three operations?

$$E_1 = \begin{pmatrix} \quad \end{pmatrix} \qquad E_2 = \begin{pmatrix} \quad \end{pmatrix} \qquad E_3 = \begin{pmatrix} \quad \end{pmatrix}$$

c) Write an equation for B in terms of A and E_1, E_2, E_3.

$B =$

d) Write an equation for A in terms of B and $E_1^{-1}, E_2^{-1}, E_3^{-1}$.

$A =$

Problem 5. [10 points]

Consider the subspace

$$V = \text{Span}\left\{ \begin{pmatrix} 1 \\ 4 \\ 7 \end{pmatrix}, \begin{pmatrix} 2 \\ 5 \\ 8 \end{pmatrix}, \begin{pmatrix} 3 \\ 6 \\ 9 \end{pmatrix} \right\}.$$

a) Show that $\begin{pmatrix} -4 \\ -4 \\ -4 \end{pmatrix}$ is in V.

b) Show that $\begin{pmatrix} -4 \\ -4 \\ 4 \end{pmatrix}$ is not in V.

c) Circle one: V is a point line plane space.

Problem 6. [15 points]

Find examples of matrices with the following properties. If no such matrix exists, explain why not.

a) A 2×3 matrix A such that the solution set of $Ax = 0$ is the line spanned by $(1,2,1)$ and the solution set of $Ax = \binom{2}{1}$ is the point $\{(1,0,0)\}$.

b) A 3×2 matrix A such that $\mathrm{Col}(A) = \mathbf{R}^3$.

c) A 2×3 matrix A such that $\mathrm{Col}(A) = \mathbf{R}^3$.

d) A 2×3 matrix A such that $\mathrm{Nul}(A) = \mathbf{R}^3$.

e) An invertible 2×2 matrix such that $A\binom{1}{2} = A\binom{2}{1}$.
