

MATH 218D-1
PRACTICE MIDTERM EXAMINATION 1

Name		Duke Email	
-------------	--	-------------------	--

Please **read all instructions** carefully before beginning.

- Do not open this test booklet until you are directed to do so.
- You have 75 minutes to complete this exam.
- If you finish early, go back and check your work.
- The graders will only see the work on the **printed pages**. You may use other scratch paper, but the graders will not see anything written there.
- You may use a **calculator** for doing arithmetic, but you should not need one. All other materials and aids are strictly prohibited.
- For full credit you must **show your work** so that your reasoning is clear, unless otherwise indicated.
- Do not spend too much time on any one problem. Read them all through first and attack them in an order that allows you to make the most progress.
- Good luck!

This is a practice exam. It is meant to be similar in format, length, and difficulty to the real exam. It is **not** meant as a comprehensive list of study problems. I recommend completing the practice exam in 75 minutes, without notes or distractions.

Problem 1.

[20 points]

Consider

$$A = \begin{pmatrix} 0 & 1 & -1 & 0 \\ -2 & -1 & -1 & 2 \\ 2 & 3 & 5 & 4 \\ 6 & 3 & -3 & 0 \end{pmatrix} \quad b = \begin{pmatrix} -2 \\ -8 \\ 4 \\ 0 \end{pmatrix}.$$

- a) Carry out Gaussian reduction with maximal partial pivoting to find a $PA = LU$ decomposition. You should obtain

$$U = \begin{pmatrix} 6 & 3 & -3 & 0 \\ 0 & 2 & 6 & 4 \\ 0 & 0 & -4 & -2 \\ 0 & 0 & 0 & 3 \end{pmatrix}.$$

Please write the row operations you performed.

$$L = \begin{pmatrix} & & & \\ & & & \\ & & & \\ & & & \end{pmatrix} \quad P = \begin{pmatrix} & & & \\ & & & \\ & & & \\ & & & \end{pmatrix}$$

b) Write the elementary matrices for the row operations you performed.

c) Solve the equations $Ly = Pb$ and $Ux = y$ to find a solution of $Ax = b$.

$$x = \begin{pmatrix} \\ \\ \\ \end{pmatrix}$$

d) Briefly explain why step **b)** is faster than solving $Ax = b$ using Gaussian elimination on the augmented matrix $(A \mid b)$, once you have a $PA = LU$ decomposition.

Problem 2.

[15 points]

a) Compute the inverse of $\begin{pmatrix} 1 & -2 & 3 \\ -2 & 6 & -5 \\ 2 & 3 & 9 \end{pmatrix}$.

Be sure to write out any row operations you perform.

$$\begin{pmatrix} 1 & -2 & 3 \\ -2 & 6 & -5 \\ 2 & 3 & 9 \end{pmatrix}^{-1} = \begin{pmatrix} & & \\ & & \\ & & \end{pmatrix}$$

b) For which value(s) of k is $\begin{pmatrix} 1 & -2 & 3 \\ -2 & 6 & k \\ 2 & 3 & 9 \end{pmatrix}$ not invertible?

$$k = \boxed{}$$

Problem 3.

[20 points]

Consider

$$A = \begin{pmatrix} 1 & 3 & -2 & 0 \\ -2 & -6 & 6 & -2 \\ 2 & 6 & 3 & -7 \end{pmatrix} \quad b = \begin{pmatrix} 2 \\ -8 \\ -10 \end{pmatrix}.$$

- a) Find the parametric vector form of the solution set of $Ax = b$. Be sure to write out any row operations you perform.

$$x = \begin{pmatrix} \\ \\ \\ \end{pmatrix} +$$

- b) Write down two different solutions of $Ax = b$. (Your answer will be two vectors with numbers in them.)

$$x_1 = \begin{pmatrix} \\ \\ \\ \end{pmatrix} \quad x_2 = \begin{pmatrix} \\ \\ \\ \end{pmatrix}$$

- c) Find a set of vectors spanning the solution set of $Ax = 0$ (for the same matrix A above).

$$(\text{solution set}) = \text{Span} \left\{ \begin{pmatrix} \\ \\ \\ \end{pmatrix}, \begin{pmatrix} \\ \\ \\ \end{pmatrix} \right\}$$

- d) Let $v = (-1, 1, 1, 1)$. Check that $Av = 0$, and write v as a linear combination of the spanning vectors you obtained in c).

[Hint: what values do the free variables have to take?]

Problem 4.

[20 points]

For a certain 2×2 matrix A , the solution set of $Ax = \begin{pmatrix} 1 \\ 1 \end{pmatrix}$ is drawn.

- a) Draw the solution set of $Ax = 0$ and the solution set of $Ax = \begin{pmatrix} -1 \\ -1 \end{pmatrix}$ in the grid below. Be sure to label which is which.

b) $\text{rank}(A) = \boxed{}$

- c) Draw the span of the columns of A . Be precise!

Problem 6.

[10 points]

Consider the span

$$V = \text{Span} \left\{ \begin{pmatrix} 1 \\ 4 \\ 7 \end{pmatrix}, \begin{pmatrix} 2 \\ 5 \\ 8 \end{pmatrix}, \begin{pmatrix} 3 \\ 6 \\ 9 \end{pmatrix} \right\}.$$

a) Show that $\begin{pmatrix} -4 \\ -4 \\ -4 \end{pmatrix}$ is in V .

b) Show that $\begin{pmatrix} -4 \\ -4 \\ 4 \end{pmatrix}$ is not in V .

c) Circle one: V is a point line plane space.
